1.0 INTRODUCTION

The Douglas Aircraft Company (DAC) C-6 Facility is located at 19503 South Normandie Avenue, Torrance, California (Figure 1). Quarterly groundwater sampling is being conducted in response to the California Regional Water Quality Control Board - Los Angeles Region correspondence to DAC, dated 7 April 1992. This report summarizes laboratory analytical data generated through the chemical analysis of groundwater samples collected during the week of 11 December 1995, Fourth Quarter 1995.

2.0 QUARTERLY MONITORING PROGRAM

Fourth Quarter 1995 groundwater sampling was performed in accordance with standard sampling procedures. Static water level depths were measured on 12 December 1995 prior to initiating purging of groundwater from any observation. Static water depths on monitoring wells (MW-9, MW-18 and MW-19) located in the southern portion of the DAC property installed for the Montrose Chemical Corporation Remedial Investigation were not measured for this quarter.

Groundwater samples were collected from the following fifteen wells (Figure 2) and chemically analyzed for volatile organic compounds (VOCs) by EPA Method 8240/8260 for the Fourth Quarter 1995.

WCC-1S, WCC-2S, WCC-3S, WCC-4S, WCC-5S, WCC-6S, WCC-7S, WCC-8S, WCC-9S, WCC-10S, WCC-11S, WCC-12S, WCC-1D, WCC-3D, and DAC-P1.

Table 1 summarizes observation well construction details. Tables 2 and 3 summarize the results of chemical analysis of groundwater samples and duplicates for major and minor constituents at the C-6 facility, respectively. Chemicals detected in samples from each observation well are shown in Figure 3. Table 4 summarizes available measured groundwater elevations to date. Estimated groundwater elevation contours for the Fourth Quarter are presented in Figure 4. Historical chemical concentration profiles for the indicator chemicals trichloroethene and 1,1-dichloroethene are shown in Figure 5. Copies of laboratory data sheets, laboratory/field Quality Control data sheets, groundwater purge and sample forms, and Chain-of-Custody records are included in Appendices A, B, C, and D respectively.

2.1 Groundwater Sampling Procedures

Prior to collecting groundwater samples from each well, groundwater was purged using an electrical submersible pump that was temporarily installed in the observation well. After lowering the pump to the approximate mid-point of the saturated well screen, approximately three to five wetted casing volumes of groundwater were purged from the well until the following groundwater monitoring parameters had stabilized to within 10% of preceding values: pH, electrical conductivity, and temperature. Purged groundwater was stored onsite in DOT approved 55 gallon barrels pending the results of laboratory analysis of samples.

Following groundwater purging, the flow rate of the submersible pump was reduced to 250 milliliters/minute. To collect a representative groundwater sample, the pump intake valve was positioned at the approximate mid-point of the saturated well screen interval. The recovered water was discharged into three labeled 40-ml capacity vials, preserved with HCl.

2.2 Field QA/QC Procedures

Duplicate groundwater samples were collected for the sampling round on 15 December 1995 for quality control purposes. The duplicate was collected in three HCl-preserved vials and identified by inserting the collection date after "DW-" (DW-121595). No further sample identification was provided to the laboratory. Sample DW-121595 was taken from observation well WCC-1S.

Following decontamination of the submersible pump, and prior to collection of groundwater samples from the successive well, an equipment rinsate blank was prepared for laboratory analysis. The equipment rinsate blank was prepared by pouring Reagent Grade II water, prepared by the analytical laboratory, over the pump and collecting the rinsate in two 40-ml vials preserved with HCl. The blanks were identified following a similar protocol to that used for duplicate water samples and are identified as "EB121595" and "RB121695". The wells sampled before and after rinsate blank preparation were recorded. EB121595 and RB121695 were collected after sampling wells WCC-1S and DAC P-1, the last wells sampled on those days. Trip blanks were also analyzed for sampling and shipping activities on 15 and 16 December and are identified as TB-121595 and TB-121695.

All groundwater, duplicate, and field blank samples were transported in ice-cooled chests to Curtis & Tompkins, Ltd., General Analytical Laboratory, Irvine, California using U.S. EPA-recommended Chain-of-Custody procedures.

3.0 EVALUATION OF ANALYTICAL RESULTS

3.1 Groundwater Gradient

Groundwater levels were measured prior to sampling on 12 December 1995 (Table 4 and Appendix C). The shallow zone groundwater elevations measured for this quarter ranged from 15.35 feet below mean sea level (MSL) to 16.59 feet below MSL. An estimated potentiometric surface map for the shallow zone as measured on this day is presented as Figure 4. The groundwater gradient in the shallow zone was generally south-southeast with a southerly directed trough-like depression between observation wells WCC-10S and WCC-12S.

Insufficient data (two wells) are available to define the groundwater gradient in the deeper zone. Groundwater elevation in the two wells (WCC-1D and WCC-3D) was approximately 16.31 and 16.17 feet below MSL, respectively.

3.2 Analytical Data

The results of chemical analysis of groundwater and duplicate samples are summarized in Tables 2 and 3. Table 2 lists major constituents and Table 3 lists additional minor constituents of samples tested. The duplicate groundwater samples are indicated by an asterisk and are presented with the "original" groundwater samples. These tables include cumulative analytical data for all monitoring wells and detection limits (where available) for the listed chemicals.

The following observations are noted:

- Data for groundwater samples collected from well DAC-P1, located at the upgradient property boundary, indicate a TCE concentration of 20,000 micrograms per liter ($\mu\text{g}/\text{L}$) coming onto DAC's property. This test result is within the historical range. Other chemicals detected in well DAC-P1 include 1,1-DCE, 1,1-DCA, 1,1,1-TCA, cis- and trans-1,2-DCE, chloroform and toluene. The concentrations of these chemicals were within historical ranges though low level detections of 1,1-DCA, 1,1,1-TCA, and trans-1,2-DCE have not been reported for this well in several years. Future monitoring will provide data to assess the changes in chemical compounds observed this quarter. DAC-P1 is screened in the shallow zone.
- Background concentrations of TCE and 1,1-DCE in the shallow zone upgradient or cross gradient wells WCC-10S, WCC-2S, and WCC-11S decreased slightly, but are within historical ranges at concentrations of 60 to 210 $\mu\text{g}/\text{L}$ of TCE and tens of $\mu\text{g}/\text{L}$ of 1,1-DCE.
- Groundwater elevation data (Figure 4) and chemical concentration data (Figure 3) indicate that chemical transport in the shallow zone is generally in a southerly to southeasterly direction in the vicinity of buildings 36 and 41. Most chemical concentration data from the eastern boundary observation wells (WCC-5S, and WCC-9S) are within the same range or lower than upgradient or cross gradient "background level" wells (WCC-10S, WCC-2S and WCC-11S).
- WCC-3S data continue to show decreases in 1,1-DCE and toluene, but concentrations are still within historical ranges.
- Increases of 1,1-DCE, 1,1,1-TCA, and toluene concentrations were observed for well DAC-P1.
- Decreases of 1,1-DCE, 1,1,1-TCA, TCE, and toluene concentrations were observed in well WCC-3D, though the concentrations were within historical variation.
- WCC-6S data, which showed significant decreases in 1,1-DCE, 1,1,1-TCA, MIBK, cis-1,2-DCE, and toluene in the previous sampling event, show an increase in concentrations to historical ranges.
- Concentrations of 1,1-DCE and TCE in wells WCC-1S and WCC-8S, which showed decreases in the previous sample event, show an increase to more recent historical ranges.

Kennedy/Jenks Consultants

- Other chemical concentration variances within observation wells were typical of historical ranges.
- Analytical data from the equipment rinsate blanks, sample duplicates, trip blanks, and laboratory spikes and duplicates are indicative of reliable data. A detection of 1,1-DCE in the rinsate blank from 15 December was reported at the detection limit of 2 µg/L and is not considered to have potential to impact later samples or to be problematic at such low concentrations.

Due to laboratory overload, the Fourth Quarter sample analysis was subcontracted by Curtis & Tompkins Laboratory to Calscience Laboratory in Garden Grove. The subcontract laboratory did not test samples for keytones and several reported values have been flagged as estimated values by Curtis & Tompkins Laboratory. Absence of these data for this quarter have a relatively insignificant impact on the eight year historical record of monitoring data at the C-6 facility. These compounds will be reported in subsequent quarterly monitoring events.

Notes:

- 1. Reference point is north side, top of well casing
- 2. Reference point elevation measured by Hargis + Associates, Inc.
- 3. Water Level Elevation not measured due to wellhead obstructions.
- 4. Well WCC-6S could not be opened on 20 September 1995. The water level elevation shown was measured on 6 September 1995.
- 5. Installed by Hargis + Associates, Inc. for Montrose Chemical Corporation
- 6. NA - Not Available

LABORATORY REPORT

Laboratory Number: 213527

Page 1 of 25

Date Received: 12/15/95

Date Reported: 01/02/95

Issued To: KENNEDY/JENKS
2151 MICHELSON DR.
SUITE 100
IRVINE, CA 92715
ATTN: SARAH BARTLING

Project I.D.: 944016.01

Location: DAC

Report On: TWELVE LIQUID SAMPLES ANALYZED AS SPECIFIED ON ATTACHED CHAIN OF CUSTODY

This report certifies that the samples were received in good condition (i.e. intact, chilled, and/or preserved appropriately) and that strict chain of custody procedures were adhered to at all times. It further certifies that the methods of analysis used are in fact those listed within this report and that Curtis & Tompkins, Ltd. has current certification for all work performed in the laboratory. Exceptions to this statement are specifically noted in the analytical report or on the attached chain of custody.

ABBREVIATIONS

- BS/BSD - Blank Spike / Blank Spike Duplicate
- BTEX - Benzene, Toluene, Ethyl Benzene, and Total Xylenes.
- CCR - California Code of Regulations.
- DHS - California Department of Health Services.
- EPA - United States Environmental Protection Agency.
- LCS - Laboratory Control Spike
- LUFT - Leaking Underground Fuel Tank.
- MDL - Method Detection Limit
- NA - Not Applicable.
- NC - Not Calculable
- ND - Not Detected at or above the defined detection limit.
- PQL - Practical Quantitation Limit
- RPD - Relative percent difference.
- STLC - Soluble Threshold Limit Concentration.
- Surr. - Surrogates.
- TCLP - Toxicity Characteristic Leaching Procedure.
- TEH - Total Extractable Petroleum Hydrocarbons.
- Title 26 - Title 26 of the California Code of Regulations (CCR).
- TR~ - Trace, estimated value .
- TTLC - Total Threshold Limit Concentration.
- TVH - Total Volatile Hydrocarbons.
- WET - Waste Extraction Test.

UNITS

- cm³ - Cubic centimeter 1umhos/cm - uS/cm - Micro Siemens/centimeter
- Kg - kilogram. ppb - Parts per billion.
- L - Liter. ppm - Parts per million.
- mg - Milligrams. ug - Micrograms.
- M³ - Cubic meter. ppbv - Parts per billion per unit volume

- (1) Write only one sample number in each space.
(2) Specify type of sample(s): Water (W), Solid (S), or indicate type.
(3) Mark each sample which should be composited in Laboratory as follows: Place an "A" in box for each sample that should be composited into one sample; use sequential letter for additional groups.
(4) Preservation of sample.
(5) Write each analyses requested across top. Place an "X" in appropriate column to indicate type of analysis needed for each sample.
